

Cisco Aironet 802.11A/B/G Wireless PCI Adapter

The Cisco® Aironet® 802.11a/b/g Wireless PCI Adapter provides high-performance 54-Mbps connectivity in the 2.4- and 5-GHz bands.

Whether configured to support single 802.11b coverage, single 802.11g coverage, single 802.11a coverage, dual-mode 802.11a/g coverage, or trimode 802.11a/b/g coverage, the Cisco Aironet 802.11a/b/g Wireless PCI Adapter is Wi-Fi compliant and combines the freedom of wireless connectivity with 802.11i/ Wi-Fi Protected Access 2 (WPA2) encryption for the performance, security, and manageability that businesses require (Figure 1).

The low-profile form factor and two-meter cable length provide significant flexibility for installation in low-profile devices, such as slim desktops and point-of-sale (POS) devices. For versatility, both a low profile and a standard profile bracket frame are included with the adapter. The attached dual-band, 2.4/5-GHz, 1-dBi effective gain antenna has a two-meter cable that enables optimal placement for maximum performance.

Enterprise-Class Security Solution

Designed with enterprise-class security requirements in mind, the Cisco Aironet 802.11a/b/g Wireless PCI Adapter uses the 802.1X standard for port-based network access. A full array of Extensible Authentication Protocol (EAP) types for user-based authentication, together with enterprise caliber Advanced Encryption Standard (AES) encryption, provide full 802.11i support. The adapter supports WPA2, the Wi-Fi Alliance certification for interoperable, standards-based wireless LAN security.

Support for Management Frame Protection (MFP) is now available on the Cisco Aironet 802.11a/b/g Wireless PCI Adapter. MFP adds security to the MAC management layer of 802.11 connectivity by cryptographically hashing the management frames and generating a Message Integrity Check (MIC) during network connection.

The Cisco Aironet 802.11a/b/g Wireless PCI Adapter supports the most common 802.1X authentication types, including EAP-Flexible Authentication via Secure Tunneling (EAP-FAST), Cisco LEAP, EAP-Transport Layer Security (EAP-TLS), Protected Extensible Authentication Protocol-Generic Token Card (PEAP-GTC), and PEAP-Microsoft Challenge Handshake Authentication Protocol version 2 (PEAP-MSCHAPv2). A wide selection of RADIUS servers, such as the Cisco Secure Access Control Server (ACS) and Cisco Access Registrar server, can be used for enterprise-class centralized user management that includes:

- Strong, mutual authentication to help ensure that only legitimate clients associate with legitimate and authorized network RADIUS servers via authorized access points
- Dynamic per-user, per-session encryption keys that automatically change on a configurable basis to protect the privacy of transmitted data
- Stronger encryption keys provided by Temporal Key Integrity Protocol (TKIP) enhancements such as message integrity check (MIC), per-packet keys via initialization vector hashing, and broadcast key rotation
- RADIUS accounting records for all authentication attempts
- IEEE 802.11i/WPA2 AES support

Enhanced Client Network Management Features

A new and improved set of client utilities includes the Cisco Aironet Desktop Utility, System Tray Utility, and Client Administration Utility. Together, these utilities provide an intuitive graphical user interface (GUI) for easy configuration, monitoring, and management of the Cisco Aironet 802.11a/b/g Wireless PCI Adapter. Enhanced client network management features include:

- **Profile manager:** Allows users to create specific profile settings for various environments, making it simple for telecommuters and business travelers to move from one environment to another.
- **Customized profile settings:** Lets users individually select the channel, service set identifier (SSID), Wired Equivalent Privacy (WEP) key, and authentication method for different locations.
- **Cisco LEAP authentication status screen:** Provides status updates regarding the Cisco LEAP authentication process.
- **Auto-selection of profiles:** Provides automatic selection of established profiles, including those configured for EAP authentication, without requiring storage of the EAP username and password in the profile.
- **System tray icon:** Provides easy access to wireless LAN connection information and one-click access to common actions, such the manual selection a profile or turning the radio on or off.
- **Cisco Aironet Client Monitor:** Provides a subset of Cisco Aironet Desktop Utility features, such as status information about the client adapter and access to basic tasks (selecting a profile, for example). This application runs from the system tray icon.
- **Troubleshooting utility:** Provides step-by-step details on the process of connecting to an access point, as well as highlights on why a connection failed.
- **Support for the most popular enterprise operating systems:** Windows XP and Windows 2000.

- **Cisco Aironet Client Adapter installation wizard for Windows:** The wizard is provided for easy installation of the client firmware, drivers, and utilities and offers several installation options: install client utilities and driver; install driver only; or make driver installation diskette(s). For ease of use, the installation wizard image file is a self-extracting (.exe) file.

Features and Benefits

Table 1 lists the features and benefits of the Cisco Aironet 802.11a/b/g Wireless PCI Adapter.

Table 1. Product Features and Benefits

Feature	Benefit
Cisco Secure Wireless Solution	IEEE 802.1X support, including EAP-FAST, Cisco LEAP, PEAP-GTC, PEAP-MSCHAPv2, and EAP-TLS for mutual authentication with dynamic per-user, per-session encryption keys via TKIP enhancements. Full support for WPA and WPA2. Full support for Management Frame Protection (MFP).
Enhanced Client Network Management Features	Bundled with comprehensive, easy-to-use client network management utilities to provide a secure, intuitive, and convenient way to manage and configure the adapter.
Cisco LEAP Single Sign-on	Convenient option to use login credentials for LEAP sign-on on the user's network, eliminating the need to enter a second set of credentials.
Cisco Wireless Domain Services (WDS)	Cisco WDS is a collection of Cisco IOS® Software features that enhance wireless LAN client mobility and simplify wireless LAN deployment and management. Cisco WDS includes radio management aggregation, fast secure roaming, client tracking, and WAN link remote site survivability.

Product Specifications
