

Juniper Networks NetScreen-Hardware Security Client

The Juniper Networks NetScreen-Hardware Security Client (HSC) is Juniper's most cost effective security solution for the fixed telecommuter and small remote office. It can easily be deployed and managed in large deployments with NetScreen-Security Manager's Rapid Deployment capabilities, eliminating expensive staging steps. Proven Stateful firewall and IPSec VPN combined with a complete set of best-in-class Unified Threat Management (UTM) security features including IPS, Antivirus (includes Anti-Spyware, Anti-Adware, Anti-Phishing), Anti-Spam, and Web Filtering allow the HSC to protect the network from worms, Spyware, Trojans, malware and other emerging attacks.

Deep Inspection (DI) Signature Packs

This feature enhancement allows ScreenOS to support targeted DI signature pack optimized for your specific network deployment. You can now select the DI signature pack that improves threat prevention for your network environment to ensure detection accuracy and coverage.

Protection Type	Deployment Type	Defense type	Attack Type
Base	Branch Offices Small/Medium Businesses	Client/Server and worm protection	Selected set of critical signatures
Client	Remote/Branch Offices	Perimeter defense, compliance for hosts (desktops, etc)	Attacks in the server-to-client direction
Server	Small/Medium Businesses	Perimeter defense, compliance for server infrastructure	Attacks in the client- to-server direction
Worm Mitigation	Remote/Branch Offices of Large Enterprises	Most comprehen- sive defense against worm attacks	Worms, Trojans, backdoor attacks

- (1) Performance, capacity and features listed are based upon systems running ScreenOS 5.4 and are the measured maximums under ideal testing conditions unless otherwise noted. Actual results may vary based on ScreenOS release and by deployment.
- (2) IPS (Deep Inspection) performance is derived using HTTP traffic with average page size of 100K with a mix of 60 % text/css, 20 % images, and 20 % files.
- (3) NAT, PAT, policy based NAT, virtual IP, mapped IP, virtual systems, virtual routers, VLANs, OSPF, BGP, RIPv2, Active/Active HA, and IP address assignment are not available in layer 2 transparent mode.
- (4) Supported via Kaspersky Lab Antivirus engine
