

SonicWALL Comprehensive Internet Security Solutions

SONICWALL

Protect Your Network from Attacks. Internet hackers steal and corrupt sensitive information and deny legitimate users access to essential services. SonicWALL Internet security appliances provide hardened firewall protection with an ICSA-certified, stateful packet inspection firewall to protect your data.

Secure Access to Your Network Resources. Organizations using the Internet to share confidential information with remote offices, telecommuters, mobile users, and partners require secure connections through virtual private networks (VPNs). SonicWALL's IPsec VPN and ASIC-based acceleration technology delivers fast, secure access to corporate resources. With SonicWALL Authentication Service, organizations can add strong user authentication using public key infrastructure (PKI) and digital certificates in an easy-to-deploy service.

Keep Your Network Virus Free. Virus attacks are one of the greatest Internet security threats today. Most organizations have some virus protection in place but remain vulnerable because of the limited time-to-protection and policy enforcement capabilities. SonicWALL Network Anti-Virus delivers industry-leading, proactive virus protection with advanced heuristics, automatic alerts, and zero administration to provide the most reliable, cost-effective anti-virus solution on the market today.

Control Your Internet Access. Content filtering allows organizations to manage Internet usage policies to improve productivity and restrict inappropriate online content. SonicWALL Internet security appliance's content filtering features combined with the SonicWALL Content Filter subscription service allow organizations to maintain Internet access policies tailored to their specific needs.

Get a Hacker's View of Your Network. Public Web, E-mail, and FTP servers, server operating systems, application software, and network devices (routers and gateways) make inviting targets for hackers. These security "holes" give hackers opportunities to strike, and if they succeed, their breaks result in serious losses. SonicWALL Vulnerability Scanning Service is an automated service that provides a "hacker's view" of an organization's network perimeter to find security weaknesses and provide expert guidance to fix them.

Globally Manage Your Security Perimeter. As distributed networks grow, so does the complexity of managing security policies and services. SonicWALL Global Management System enables distributed enterprises and service providers to manage thousands of SonicWALL Internet security appliances and security services from a central location to reduce staffing requirements, speed up deployment, and lower security management costs.

Protect Your Web Transactions. Web sites delivering e-commerce services or confidential information use SSL (Secure Sockets Layer) to secure transactions over the Internet. Processing SSL-based transactions puts a heavy load on Web server resources, resulting in lost customers, lost sales, and higher costs. SonicWALL SSL Accelerators eliminate the bottlenecks of SSL transactions at a fraction of the cost of adding HTTPS servers to maintain rapid response time for secure content.

Maximize Your Security Investment. Security products and services help protect your organization from cyber-crime but security expertise and support are essential to ensure maximum protection. SonicWALL's Professional Services, Support Services, and Training provide the resources to help you protect your network security investment.

SonicWALL Internet Security Appliances

SonicWALL GX 2500 and GX 6500

- High-bandwidth firewall and VPN performance for large enterprise installations and data centers
- ICSA-certified, stateful packet firewall and IPsec VPN solution
- Includes SonicWALL High Availability, GMS, and ViewPoint

The SonicWALL GX 2500 and GX 6500 Internet security appliances deliver mission-critical, high-bandwidth firewall and VPN solutions for large enterprise installations and data centers. The 3U rack-mount GX 2500 and GX 6500 provide hardened firewall protection with an ICSA-certified, stateful inspection firewall and integrated IPsec VPN connectivity. Built on SonicWALL's ASIC-based security architecture, the GX 2500 can support up to 5,000 VPN tunnels and the GX 6500 can support up to 10,000 VPN tunnels.

SonicWALL PRO 300

- Powerful architecture for superior firewall and 3DES VPN performance
- Flexible management options for easy fit into existing network infrastructure
- ICSA-certified, stateful packet firewall for enterprise-class protection

The SonicWALL PRO 300 Internet Security Appliance delivers high firewall and 3DES VPN performance, mission-critical network security and secure connectivity for medium-size businesses and branch offices. Built on SonicWALL's CyberSentry Security Processor, the PRO 300 delivers breakthrough performance with hardware-acceleration for superior VPN and security throughput. The PRO 300 includes SonicWALL High Availability for mission-critical security and a DMZ port for public servers.

SonicWALL PRO 200

- Powerful architecture for superior firewall and 3DES VPN performance
- Flexible management options for easy fit into existing network infrastructure
- ICSA-certified, stateful packet firewall for enterprise-class protection

The SonicWALL PRO 200 Internet security appliance delivers high firewall and VPN performance and unlimited node security for medium-size businesses and branch offices. The 1U rack-mount PRO 200 delivers hardened firewall protection with an ICSA-certified, stateful inspection firewall with integrated ICSA-certified IPsec VPN connectivity. Built on SonicWALL's CyberSentry Security Processor, the PRO 200 provides the fastest performance in its class and supports up to 500 VPN tunnels.

01-SSC-2971 International

SonicWALL PRO 100

- CyberSentry Security Processor for superior performance
- Unlimited ICSA-certified firewall node support for low cost-per-user protection
- DMZ-equipped security port for protecting public servers

The SonicWALL PRO 100 provides the best value for small businesses and institutions. It supports unlimited network nodes for low cost-per-user protection including an integrated DMZ to support public servers. The PRO 100's optional IPsec VPN upgrade future-proofs network infrastructure investments by adapting to changing security requirements.

SonicWALL SOHO3

- CyberSentry Security Processor for fast firewall & 3DES VPN performance
- Intuitive management interface reduces the time and cost of installation and management
- ICSA-certified stateful packet firewall for enterprise-class protection

The SonicWALL SOHO3 Internet Security Appliance is a flexible firewall security solution for small businesses or branch offices. The SOHO3 offers a variety of configuration and service options, including a choice of 10 or 50 node configurations, IPsec VPN, and support for comprehensive portfolio of SonicWALL security services.

SonicWALL TELE3

- CyberSentry Security Processor for fast firewall & 3DES VPN performance
- Easy management interface reduces deployment time and costs
- IPsec VPN delivers secure access through any IPsec-compliant VPN gateway

The TELE3 Internet Security Appliance is an easy-to-deploy, enterprise-class firewall and VPN connectivity solution for telecommuters and day-extenders that require fast and secure access to their organization's network resources. With its intuitive Web management interface and administration wizards, the TELE3 reduces the time and cost of installing and managing secure connectivity access.

The SonicWALL family of Internet security appliances are robust security platforms. Built on SonicWALL's ASIC-based acceleration technology, these products deliver fast, reliable performance. SonicWALL Internet security appliances allow you to seamlessly integrate all the security functions your organization needs into one easily managed solution for complete security with an ICSA-certified, stateful packet inspection firewall, IPsec VPN, IP address management, and support for SonicWALL value-added security services.

Internet Security Appliance Model	Maximum Internet Security Users	SonicWALL IPsec VPN	Maximum VPN Tunnels
SonicWALL TELE3	5	Included	5
SonicWALL SOHO3	10 or 50	Optional Upgrade	10
SonicWALL PRO 100	Unlimited	Optional Upgrade	50
SonicWALL PRO 200	Unlimited	Included	500
SonicWALL PRO 300	Unlimited	Included	1,000
SonicWALL GX 2500	Unlimited	Included	5,000
SonicWALL GX 6500	Unlimited	Included	10,000

* A single SonicWALL VPN tunnel can support a LAN-to-LAN connection between two SonicWALL Internet security appliances with multiple users on each LAN or multiple dial-up VPN clients using SonicWALL's Group VPN Client feature.

SonicWALL Global Management System

- Simplifies configuration and enforcement of global security policies and services
- Unifies management of SonicWALL VPN services
- Scales to support large deployments

SonicWALL Global Management System (GMS) is a scalable, cost-effective solution that extends SonicWALL's renowned ease of installation and administration to the management of security policies for small to large, geographically distributed networks. SonicWALL GMS enables small and medium organizations, distributed enterprises, and service providers to manage up to thousands of SonicWALL Internet security appliances and services from a central location to reduce staffing requirements, speed up deployment, and lower costs.

For more information please visit our Web site: www.sonicwall.com/sgms

SonicWALL ViewPoint

- Web-based network monitoring
- Provides graphical reports on firewall attacks, bandwidth usage, Web site visits, and more
- Easily installs on Windows NT or 2000 computers

SonicWALL ViewPoint compliments and extends SonicWALL's security solution by delivering comprehensive, high-level reporting and real-time monitoring. ViewPoint generates reports to create a thorough view of network and security activities with graphical summaries of user behavior, security threats, network Internet use, and more. SonicWALL ViewPoint provides everything you need to get up and running in one easy-to-install product to simplify network management, control, monitoring and planning.

For more information please visit our Web site: www.sonicwall.com/viewpoint

SonicWALL Network Anti-Virus

- Auto enforcement of anti-virus policy for always-on virus protection
- Advanced heuristics and early warning alerts for fast time to protection
- Zero administration to dramatically reduce support costs

SonicWALL Network Anti-Virus delivers industry-leading, proactive virus protection with zero administration. Developed in partnership with McAfee, SonicWALL Network Anti-Virus dramatically reduces time-to-protection with advanced heuristics and automatic alerts to provide the most reliable anti-virus solution on the market today. It's the only zero administration solution that automatically manages all aspects of virus protection including client auto-installation, virus definition updates, and network-wide policy enforcement to significantly reduce support costs.

For more information please visit our Web site: www.sonicwall.com/anti-virus

SonicWALL Vulnerability Scanning Service

- Detects server vulnerabilities, TCP/IP port openings and more
- Allows prioritization of vulnerabilities
- Assures ongoing security with scheduled or on-demand system checks

SonicWALL Vulnerability Scanning Service examines a network perimeter for weaknesses on an ongoing basis and provides administrators with in-depth guidance on how to address the risks and eliminate opportunities for hackers. Vulnerability scans can be scheduled on a regular basis or run on demand when policies are changed or new equipment is deployed. SonicWALL Vulnerability Scanning Service is easy to configure and run using SonicWALL's integrated, Web-based security portal at www.mysonicwall.com.

For more information please visit our Web site: www.sonicwall.com/vss

SonicWALL IPSec VPN

- IPSec VPN solution for interoperability
- Utilizes SonicWALL ASIC-based acceleration for fast throughput
- Enterprise-class secure connectivity solution

SonicWALL's ICSA-certified IPSec VPN provides an easy-to-deploy, enterprise-class secure connectivity solution for remote offices and users that require fast and secure access to an organization's network resources. SonicWALL VPN is compatible with any manufacturer's IPsec-compliant VPN gateway. SonicWALL VPN is included with the SonicWALL TELE3, PRO 200, PRO 300, GX 2500, and GX 6500 and available as an upgrade for the SonicWALL SOHO3 and PRO 100. The SonicWALL VPN Client allows remote dialup users to securely access private networks.

For more information please visit our Web site: www.sonicwall.com/vpn

SonicWALL Content Filter List

- Blocks objectionable Web sites based on the widely accepted CyberNOT List
- Customizable URL and keyword blocking
- Java, ActiveX and cookie blocking

SonicWALL Content Filter List Subscription allows organizations to create and enforce Internet access policies. The SonicWALL Content List, based on the widely accepted CyberNOT List from Cyber Patrol, ensures proper enforcement of access restrictions. Automatic updates of the Content Filter List keeps administrators current on the sites containing inappropriate online material. Administrators can customize categories of Internet sites to block or monitor sites.

For more information please visit our Web site: www.sonicwall.com/content-filter

SonicWALL Authentication Service

- Robust end-to-end VPN authentication
- Easy to deploy PKI and digital certificate solution
- Simplifies VPN client management

Establishing the identity of users on the Internet to allow VPN access to confidential resources is a significant challenge for network administrators. Digital certificates are widely accepted as the best solution for establishing user identities with absolute confidence. Implemented in collaboration with VeriSign, SonicWALL Authentication Service adds strong authentication to IPSec VPN. With this service, organizations can take advantage of the power of public key infrastructure (PKI) and digital certificates without the complexity of existing solutions.

For more information please visit our Web site: www.sonicwall.com/authentication-service

SonicWALL offers a complete line of security applications and services, including network anti-virus, VPN, PKI and digital certificate authentication, content filtering, vulnerability assessment, and global security management. These security services and applications seamlessly integrate with the SonicWALL family of Internet security appliances to provide a comprehensive Internet security solution.

SonicWALL Transaction Security Products

SonicWALL SSL-R6

- Rack-mount high performance SSL Accelerator for large secure Web sites
- Seamless integration with content switches for maximum Web site efficiency
- Redundant power supplies for mission-critical processing

The SonicWALL SSL-R6 is a 12-port, high performance, 1U rack-mount acceleration solution that supports up to 1,200 new SSL transactions per second and 30,000 simultaneous SSL connections. The SonicWALL SSL-R6 works seamlessly with Layer 7 content switches to enable load balancing of SSL traffic across all ports, enhancing site performance and content location flexibility. The SonicWALL SSL-R6 is the only product on the market that supports both transparent and non-transparent proxy modes, and allows a single port to be used for both ingress and egress traffic, with no performance degradation.

01-SSC-5142 SonicWALL SSL-R6 International

SonicWALL SSL-R3

- Rack-mount high performance SSL Accelerator for large secure Web sites
- Seamless integration with content switches for maximum Web site efficiency
- Redundant power supplies for mission-critical processing

The SonicWALL SSL-R3 is a 6-port, high performance, 1U rack-mount acceleration solution that supports up to 600 new SSL transactions per second and 15,000 sustained SSL connections. The SonicWALL SSL-R3 works seamlessly with Layer 7 content switches to enable load balancing of SSL traffic across all ports, enhancing site performance and content location flexibility. The SonicWALL SSL-R3 is the only product on the market that supports both transparent and non-transparent proxy modes, and allows a single port to be used for both ingress and egress traffic, with no performance degradation.

01-SSC-5132 SonicWALL SSL-R3 International

SonicWALL SSL-R

- Rack-mount SSL Accelerator
- Seamless integration with content switches for maximum Web site efficiency
- Redundant power supplies for mission-critical processing

The SonicWALL SSL-R is a 1U rack mount, 2-port SSL Accelerator that supports up to 200 new SSL connections per second and up to 5,000 sustained SSL connections. The SonicWALL SSL-R works seamlessly with Layer 7 content switches to enable load balancing of SSL traffic across all ports, enhancing site performance and content location flexibility. The SonicWALL SSL-R is the only product on the market that supports both transparent and non-transparent proxy modes, and allows a single port to be used for both ingress and egress traffic, with no performance degradation.

SonicWALL SSL-PCI

- Offloads all SSL processing from Web server to maintain rapid response time for secure content
- Cost-effective SSL processing solution that free up valuable Web server resources
- Plug-and-play PCI card for seamless integration into any Web server

SonicWALL SSL-PCI is a plug-and-play SSL Accelerator server card that installs directly into any secure server to offload all encryption, decryption and secure processes from the server, freeing it to perform its essential Web site tasks. SonicWALL SSL-PCI supports up to 200 new SSL connections per second and up to 5,000 sustained SSL connections. Storing up to 256 keys and certificates, the SonicWALL SSL-PCI ensures complete Web server independence and eliminates configuring SSL properties on the host application.

Part Numbers

01-SSC-5100 US/Canada
01-SSC-5102 International

SonicWALL SSL-IA

- Affordable SSL processing solution that frees up valuable Web server resources
- Offloads all SSL processing from Web server to maintain rapid response time for secure content
- Easy-to-install appliance for smaller Web sites

SonicWALL SSL-IA is an external SSL accelerator appliance that installs in front of any Web server or cluster tasked with secure transaction processing. SonicWALL SSL-IA supports up to 200 new SSL connections per second and up to 5,000 sustained SSL connections. Storing up to 256 keys and certificates, the SonicWALL SSL-IA ensures complete Web server independence and eliminates configuring SSL properties on the host application.

SonicWALL Support Programs

SonicWALL Professional Services. SonicWALL's highly experienced staff of technical consultants deliver a complete portfolio of security consulting services—from SonicWALL solution implementation and deployment to comprehensive Internet security consulting. SonicWALL consultants collaborate with your IT staff to implement solutions and bring unique expertise to complex problems. Combined with their detailed knowledge of SonicWALL products and services, our consultants bring extensive industry experience, tested methodologies, and the backing of SonicWALL's world-class engineering support to every engagement.

SonicWALL Support Services. SonicWALL's comprehensive support services protect your network security investment and offer you the support you need—when you need it. SonicWALL offers a full range of support programs including SonicWALL Warranty Support, SonicWALL Support 8X5, and SonicWALL Support 24X7. SonicWALL support professionals are Certified Internet Security Administrators with extensive networking and Internet security experience to ensure quick, accurate resolution of your problem.

SonicWALL Training. SonicWALL Training offers a comprehensive curriculum designed to help you maximize your Internet security investment. From the introductory Certified SonicWALL Security Administrator course to the advanced Certified SonicWALL Global Manager, SonicWALL Training can help your IT professionals build an impenetrable wall against Internet attacks.

For more information on SonicWALL support services, please visit our Web site: www.sonicwall.com
