# Features and Benefits

Main features of Cisco 10GBASE SFP+ modules include:

- · Smallest 10G form factor
- Supports 10GBASE Ethernet
- Hot-swappable input/output device that plugs into an Ethernet SFP+ port of a Cisco switch
- Provides flexibility of interface choice
- Supports "pay-as-you-populate" model
- · Supports digital optical monitoring capability
- Supports the Cisco quality identification (ID) feature that enables a Cisco switch to identify whether the module is certified and tested by Cisco
- Optical interoperability with 10GBASE XENPAK, 10GBASE X2, and 10GBASE XFP interfaces on the same link

### Cisco SFP-10G-SR

The Cisco 10GBASE-SR Module supports a link length of 26m on standard Fiber Distributed Data Interface (FDDI)-grade multimode fiber (MMF). Using 2000MHz\*km MMF (OM3), up to 300m link lengths are possible. Using 4700MHz\*km MMF (OM4), up to 400m link lengths are possible.

#### Cisco SFP-10G-LRM

The Cisco 10GBASE-LRM Module supports link lengths of 220m on standard Fiber Distributed Data Interface (FDDI) grade multimode fiber (MMF). To ensure that specifications are met over FDDI-grade, OM1 and OM2 fibers, the transmitter should be coupled through a mode conditioning patch cord. No mode conditioning patch cord is required for applications over OM3 or OM4. For additional information on mode conditioning patch cord requirements please see: <a href="http://www.cisco.com/en/US/prod/collateral/modules/ps5455/product\_bulletin\_c25-530836.html">http://www.cisco.com/en/US/prod/collateral/modules/ps5455/product\_bulletin\_c25-530836.html</a>.

The Cisco 10GBASE-LRM Module also supports link lengths of 300m on standard single-mode fiber (SMF, G.652).

### Cisco FET-10G

The Cisco FET-10G Fabric Extender Transceiver support link lengths up to 100m on laser-optimized OM3 or OM4 multimode fiber. It is supported on fabric links only from a Nexus 2000 to a Cisco parent switch. Note this product is not orderable individually. For more information refer to Nexus 2000 datasheet: http://www.cisco.com/en/US/prod/collateral/switches/ps9441/ps10110/data\_sheet\_c78-507093.html.

### Cisco SFP-10G-LR

The Cisco 10GBASE-LR Module supports a link length of 10 kilometers on standard single-mode fiber (SMF, G.652).

### Cisco SFP-10G-ER

The Cisco 10GBASE-ER Module supports a link length of up to 40 kilometers on standard single-mode fiber (SMF, G.652).

### Cisco SFP-10G-ZR

The Cisco 10GBASE-ZR Module supports link lengths of up to about 80 kilometers on standard single-mode fiber (SMF, G.652). This interface is not specified as part of the 10 Gigabit Ethernet standard and is instead built according to Cisco specifications.

#### Cisco SFP+ Copper

Cisco SFP+ Copper Twinax cables are suitable for very short distances and offer a highly cost-effective way to connect within racks and across adjacent racks. Cisco offers passive Twinax cables in lengths of 1, 3 and 5 meters, and active Twinax cables in lengths of 7 and 10 meters.

### **Technical Specifications**
