OVERVIEW

The UCS C220 M5 SFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 1U form factor with the addition of the Intel® Xeon® Processor Scalable Family, 24 DIMM slots for 2666-MHz or 2933-MHz DIMMs with capacity points up to 128 GB, 2666-MHz DCPMMs with capacity points up to 512 GB, two 2 PCI Express (PCIe) 3.0 slots, and up to 10 SAS/SATA hard disk drives (HDDs) or solid state drives (SSDs). The C220 M5 SFF server also includes one dedicated internal slot for a 12G SAS storage controller card.

The latest update includes support for 2nd Generation Intel® Xeon® Scalable Processors, 2933-MHz DDR4 memory, and the new 512GB Intel® Optane™ DC Persistent Memory Modules (DCPMMs). With this combination of features, up to 9 TB of memory is possible (using 12 x 256 GB DDR4 DIMMs and 12 x 512 GB DCPMMs).

The C220 M5 server includes one dedicated internal modular LAN on motherboard (mLOM) connector for installation of a Cisco Virtual Interface Card (VIC) or third-party network interface card (NIC), without consuming a PCI slot, in addition to 2 x 10Gbase-T Intel x550 embedded (on the motherboard) LOM ports.

The Cisco UCS C220 M5 server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture, enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

Table 1 Capabilities and Features (continued)

Capability/Feature	Description
Internal storage devices	Drive storage: Drives are installed into front-panel drive bays that provide hot-swappable access for SAS/SATA drives. The server is orderable in two different versions: ■ UCSC-C220-M5SX: • Up to 10 SFF SAS/SATA hard drives (HDDs) or SAS/SATA solid state drives (SSDs). • Optionally, up to two SFF NVMe PCIe SSDs (replacing SAS/SATA drives). These drives must be placed in front drive bays 1 and 2 only and are connected to riser 2. The rest of the bays (3 - 10) can be populated with SAS/SATA SSDs or HDDs. Two CPUs are required when choosing NVMe SSDs. ■ UCSC-C220-M5SN: • Up to 10 SFF NVMe PCIe SSDs only. The drives in slots 1 and 2 are connected to riser 2 and the drives in slots 3 through 10 are connected to the PCIe switch card plugged into the internal HBA slot. Two CPUs are required for the UCSC-C220-M5SN. Other storage: ■ One internal USB 3.0 port on the motherboard that you can use with an optional 16 GB USB thumb drive for additional storage. ■ A mini-storage module connector on the motherboard supports either: • An SD card module with two SD card slots. Mixing different capacity SD cards is not supported. • An M.2 module with two SATA M.2 SSD slots. Mixing different capacity M.2 modules is not supported.
	 NOTE: SD cards and M.2 SSDs cannot be mixed. See details for RAID functionality in the ORDER M.2 SATA SSDs (OPTIONAL) section.
Integrated management processor	■ One socket for a micro-SD card on PCIe riser 1. The micro-SD card serves as a dedicated local resource for utilities such as HUU. Images can be pulled from a file share (NFS/CIFS) and uploaded to the cards for future use. Baseboard Management Controller (BMC) running Cisco Integrated Management Controller (CIMC) firmware. Depending on your CIMC settings, the CIMC can be accessed through the 1GE dedicated management port, the 1GE/10GE LOM ports, or a Cisco virtual interface card (VIC). CIMC manages certain components within the server, such as the Cisco 12G SAS HBA.

Notes:

1. UPI = Ultra Path Interconnect. 2-socket servers support only 2 UPI performance, even if the CPU supports 3 UPI.
2. If higher or lower speed DIMMs are selected than what is shown in [Table 4 on page 19](#) for a given CPU speed, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.
3. For details on memory support for processor classes and CPU modes, see [SPARE PARTS, page 78](#)

Approved Configurations**(1) DIMM only configurations:**

- Select one or two identical CPUs listed in [Table 3 on page 13](#)

(2) DIMM/DCPMM Mixed Configurations:

- You must select two identical CPUs listed in [Table 3 on page 13](#)

Caveats

- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
 - [STEP 3 SELECT MEMORY, page 18](#)
 - [STEP 4 SELECT RAID CONTROLLERS, page 25](#)
 - [STEP 5 SELECT DRIVES, page 30](#)
 - [STEP 6 SELECT PCIe OPTION CARD\(s\), page 34](#)

STEP 3 SELECT MEMORY

The available memory for the C220 M5 SFF is as follows:

- Clock speed: 2666 MHz or 2933 MHz depending on CPU type
- Ranks per DIMM: 1, 2, 4, or 8
- Operational voltage: 1.2 V
- Registered ECC DDR4 DIMMs (RDIMMs), Load-reduced DIMMs (LRDIMMs), through-silicon via DIMMs (TSV DIMMs), or Intel® Optane™ DC Persistent Memory Modules (DCPMMs).
- New server purchases that include 2nd Generation Intel Scalable CPUs must use 2933-MHz DIMMs.

Memory is organized with six memory channels per CPU, with up to two DIMMs per channel, as shown in [Figure 4](#).

Figure 4 C220 M5 SFF Memory Organization

DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in [Table 4](#).

NOTE: When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

See [Table 7](#) for DCCPM memory modes.

Table 7 Intel® Optane™ DC Persistent Memory Modes

Intel® Optane® DC Persistent Memory	
App Direct Mode:	DCPMM operates as a solid-state disk storage device. Data is saved and is non-volatile. Both DCPMM and DIMM capacity counts towards CPU tiering (both DCPMM and DIMM capacities count towards the CPU capacity limit)
Memory Mode: ¹	DCPMM operates as a 100% memory module. Data is volatile and DRAM acts as a cache for DCPMMs. Only DCPMM capacity counts towards CPU tiering (only the DCPMM capacity counts towards the CPU capacity limit). This is the factory default mode.
Mix Mode:	DRAM as cache. Only DCPMM capacity counts towards CPU tiering (only the DCPMM capacity counts towards the CPU capacity limit)

Notes:

1. For Memory Mode, the Intel-recommended DIMM to DCPMM capacity ratio in the same CPU channel is from 1:4 to 1:16. So if you use a 128 GB DIMM in a channel, you could use a 512 GB DCPMM for a 1:4 capacity ratio. If you use a 32 GB DIMM in a channel, you could use a 512 GB DCPMM for a 1:16 capacity ratio. There are several other combinations possible

Notes:

1. All systems must be fully populated with two CPUs when using DCPMMs at this time.

NOTE: There are three possible memory configurations for each CPU when combining DIMMs and DCPMMs, and the configurations must be the same for each CPU:

- 6 DIMMs and 2 DCPMMs, or
 - 6 DIMMs and 4 DCPMMs, or
 - 6 DIMMs and 6 DCPMMs
-

For detailed Intel DCPMM configurations, refer to the following document:

[Cisco UCS C220 M5 Server Installation and Service Guide](#)

For detailed DIMM/DCPMM informations, refer to

[Cisco UCS C220/C240/B200 M5 Memory Guide](#)

STEP 4 SELECT RAID CONTROLLERS

RAID Controller Options (internal HDD/SSD support)

NOTE: NVMe drives are controlled directly by CPU2 and not by any RAID controller.

Embedded Software RAID

The default RAID configuration is embedded software RAID, which supports only SATA HDDs and enterprise value SATA SSDs (RAID 0, 1, 10). A maximum of 8 SATA drives are supported with embedded software RAID. Embedded RAID requires a SATA interposer board.

NOTE: The embedded software RAID is limited to Windows and Linux operating systems only. There is no VMware support for embedded software RAID.

Cisco 12G SAS RAID Controller

You can choose a Cisco 12G SAS RAID controller, which plugs into a dedicated internal RAID controller card connector. This RAID controller includes a 2 GB cache and supports RAID 0, 1, 5, 6, 10, 50, 60, JBOD mode and SRAID0.

NOTE: The number of RAID groups (virtual drives) supported per RAID controller is as follows:

- Embedded RAID = 8
- Cisco 12G SAS RAID controller = 64

SAS HBA (internal HDD/SSD/JBOD support)

You can choose a SAS HBA for JBOD or Pass-through mode support:

- The Cisco 12G SAS HBA plugs into an internal dedicated RAID controller connector.

SAS HBA (external JBOD support)

In addition to a RAID controller or JBOD controller for internal drives, you can choose the following SAS HBA for external JBOD drive connectivity (non-RAID):

- Cisco 9400-8e 12G SAS HBA for external JBOD attach. You can have up to two of these, one in each of the PCIe slots in the rear panel. Each one controls up to 8 external drives.

RAID Volumes and Groups

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For embedded software RAID:
 - Use only SATA HDDs or SATA SSDs
 - Embedded software RAID has two ports and each port can control 4 drives, for 8 drives total.
 - Each set of 4 SATA HDDs for a port must be in separate RAID volumes.
 - You cannot mix drives across ports to create a RAID volume.
 - For more details, see [Embedded Software RAID](#).
- For the Cisco 12G SAS RAID controller upgrade:
 - Use either all SAS HDDs, or all SAS SSDs, or all SATA SSDs in each RAID volume

Select RAID Controller Options

Select one of the following:

- Embedded software RAID (this is the default if no other selection is made), or
- One Cisco 12G SAS RAID controller or Cisco 12G SAS HBA (see [Table 9](#))

NOTE: The UCSC-C220-M5SN does not support embedded RAID.

NOTE: The default RAID solution is embedded software RAID that supports a limited number of drives, operating systems, and virtualized environments. For a more comprehensive RAID solution, choose a controller from [Table 9](#).

Table 9 Hardware Controller Options

Product ID (PID)	PID Description
Controllers for Internal Drives	
Note that if the following Cisco 12G SAS RAID controller or Cisco 12G SAS HBA controller is selected, it is factory-installed in the dedicated internal slot.	
UCSC-RAID-M5	Cisco 12G SAS RAID Controller with 2GB FBWC ■ Supports up to 10 internal SAS HDDs and SAS/SATA SSDs. ■ Supports RAID 0, 1, 5, 6, 10, 50, 60, and JBOD mode. Supports running mixed RAID and JBOD mode. ■ For all self-encrypting drives (SED), standalone Management (CIMC/UCSM) is supported for configuring and managing local keys. For now, SED drives are managed with local key management only. Third-party key management will be supported (KMIP compliant).
UCSC-SAS-M5	Cisco 12G SAS HBA ■ Supports up to 10 internal SAS HDDs and SAS/SATA SSDs ■ Supports JBOD mode only (no RAID functionality). Ideal for SDS (Software Defined Storage) applications. It is also ideal for environments demanding the highest IOPs (for external SSD attach), where a RAID controller can be an I/O bottleneck. ■ No SED drive support
Controller for External Drives (plugs into PCIe slot)	
UCSC-9400-8E	Cisco 12G 9400-8e 12G SAS HBA for external JBOD attach. You can install up to two of these and place them in the rear PCIe slots.
RAID Configuration Options (not available for Cisco 12G SAS HBA or embedded software RAID)	
R2XX-SRAID0	Enable Single Disk Raid 0 Setting
R2XX-RAID0	Factory preconfigured RAID striping option Enable RAID 0 Setting. Requires a minimum of one hard drive.
R2XX-RAID1	Factory preconfigured RAID mirroring option Enable RAID 1 Setting. Requires exactly two drives with the same size, speed, capacity.
R2XX-RAID5	Factory preconfigured RAID option Enable RAID 5 Setting. Requires a minimum of three drives of the same size, speed, capacity.
R2XX-RAID6	Factory preconfigured RAID option Enable RAID 6 Setting. Requires a minimum of four drives of the same size, speed, capacity.
R2XX-RAID10	Factory preconfigured RAID option Enable RAID 10 Setting. Requires an even number of drives (minimum of four drives) of the same size, speed, capacity.

**NOTE:**

- Although RAID levels 50 and 60 are not orderable from the factory, they are supported for selected controllers as shown in [Table 9](#).
- For Cisco SAS 9400-8e 12G SAS HBA external drive enclosure support, see the enclosure section of the compatibility list at the following link:

<https://www.broadcom.com/support/storage/interop-compatibility>

Customers should contact their storage vendor for technical support related to external JBOD enclosures.

Approved Configurations

- Embedded software RAID (the default) supports up to 8 internal SATA HDDs with RAID 0, 1, 10 support.
- The Cisco 12G SAS RAID controller upgrade option supports up to 10 internal drives with up to RAID 0, 1, 10, 5, 6, 50, 60 and JBOD mode support.
- The Cisco 12G SAS HBA upgrade option supports up to 10 internal drives with JBOD support.
- Up to two Cisco 12G 9400-8e SAS HBA external drive PCIe controller cards can be installed simultaneously with the Cisco 12G SAS Modular RAID controller card (UCSC-RAID-M5) or Cisco 12 Gbps Modular SAS HBA (UCSC-SAS-M5).

Table 11 Available Hot-Pluggable Sled-Mounted Drives (*continued*)
(UCSC-C220-M5S (10-drive system) and UCSC-C220-M5SN (10-drive NVMe only system))

Product ID (PID)	PID Description	Drive Type	Capacity
NOTE: Cisco uses solid state drives from a number of vendors. All solid state drives are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.			

Notes:

- Operating Systems supported on 4k sector size drives are as follows:
 - Windows: Win2012, Win2012R2 and Win2016.
 - Linux: RHEL 6.5/6.6/6.7/7.0/7.2/SLES 11 SP3 and SLES 12
 - VMware ESXI 6.5 and later is needed for 512E drive support; VMware ESXI 6.7 and later is needed for 4KN drive support.
 - UEFI Mode must be used when booting from 4K sector size drives (legacy mode is not supported).
 - Ensure that 4K sector size and 512 byte sector size drives are not mixed in the same RAID volume.
- Two CPUs must be installed in order to include any number of SFF NVMe PCIe SSDs. If you choose one or two PCIe NVMe drives, drive slots 1 and 2 at the front of the chassis are reserved for these drives (see [Figure 2 on page 5](#) for drive slot numbering). With the C220 M5SN, you can ONLY have NVMe PCIe SSDs (up to 10).
- Targeted for write centric IO applications. Supports endurance of 10 or 3 DWPD (drive writes per day). Target applications are caching, online transaction processing (OLTP), data warehousing, and virtual desktop infrastructure (VDI).
- Targeted for read centric IO applications. Supports endurance of 1 DWPD (drive write per day). Target applications are boot, streaming media, and collaboration.

NOTE: When configuring front facing drives with spare NVMe drives, you must order an NVMe cable (PID = CBL-NVME-220FF) along with the spare drives.

Caveats

- With the UCSC-C220-M5SX you can choose only SATA HDDs when using embedded software RAID. The UCSC-C220-M5SN does not support embedded RAID.
- SFF NVMe drives are connected directly to CPU2 and not managed by the RAID controller.
- You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.
- You can mix SAS HDDs and SAS/SATA SSDs when using the Cisco 12G SAS RAID Controller or Cisco 12G SAS HBA.
- If you order any NVMe SFF drives, you must also order two CPUs.
- Mixing of HGST and Intel P45XX/P46XX NVMe drives are NOT supported. However, Intel P48XX (Optane) can be mixed with the HGST NVMe drives as long as customers are able to get the performance they are looking for.
- SFF NVMe drives are bootable in UEFI mode only.
- NVMe HHHL drives are not bootable (see [Table 12 on page 34](#)).
- SED drives can be mixed with the non-SED drives in [Table 11 on page 30](#).

Notes:

1. VIC 1385 and 1387 support QSA module (CVR-QSFP-SFP10G)
2. HHHL PCIe NVMe cards are not bootable.
3. HHHL= half-height half-length
4. Qlogic/Emulex HBAs ships with FC optics.

Approved Configurations**(1) 1-CPU Systems**

- You can select up to one of the PCIe option cards (slot 1) listed in [Table 12](#).

(2) 2-CPU Systems

- You can select up to two of the PCIe option cards (slots 1 and 2) listed in [Table 12](#).

Caveats

- For 1-CPU systems:
 - Only the full-height PCIe slot on riser 1 (slot 1) is supported

- Only a single plug-in PCIe VIC card is supported and must be installed in slot 1 (the full-height slot). However, in addition to the one PCIe VIC card, you can also choose to install an mLOM VIC card in the mLOM slot at the rear of the chassis.
- For 2-CPU systems:
 - Both PCIe slots (slots 1 and 2) are supported
 - Two plug-in PCIe VIC cards can be installed in 2-CPU systems, using slots 1 and 2. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot at the rear of the chassis and thus have three VIC cards in operation at the same time. See [Table 12 on page 34](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 7](#).
- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C220 M5 server, but are not sold on the Cisco pricelist, check the Hardware Compatibility List at this URL: http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html

STEP 7 ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES

- For list of supported optics and cables for VIC1385, VIC 1387, VIC 1440, VIC 1455, VIC 1457, VIC 1495 and VIC 1497 refer to VIC 1300 and VIC 1400 series data sheet at the following links:

STEP 8 ORDER GPU CARDS (OPTIONAL)

Select GPU Options

The available GPU PCIe options are listed in [Table 14](#).

Table 14 Available PCIe GPU Cards¹

Product ID (PID)	PID Description	Card Size	Maximum cards Per node
GPU PCIe Cards			
UCSC-GPU-P4	NVIDIA P4	Low Profile Single-Width	2
UCSC-GPU-T4-16	NVIDIA T4 16GB	Low Profile Single-Width	2

Notes:

1. Refer to [C220 M5 GPU Card Installation](#) for more details.

NOTE:

- All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM

Caveats

- GPUs cannot be mixed.
- A GPU can be installed in either PCIe slot 1 or 2; however, for 1-CPU systems, only slot 1 is available. In 2-CPU systems, matching GPUs can be installed in both slots.
- The NVIDIA P4 GPU is not supported with 2nd Generation Intel® Xeon® Processors.

STEP 9 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M5 C-series servers. Each power supply is certified for high-efficiency operation and offers multiple power output options. This allows users to “right-size” based on server configuration, which improves power efficiency, lowers overall energy costs and avoids stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

UCSC-RAILF-M4	Friction Rail Kit for C220 M4 and C220 M5 Servers
UCSC-RAILB-M4	Ball Bearing Rail Kit for C220 and C240 M4/M5 Rack Servers

Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use [Table 18](#) to order a cable management arm.

Table 18 Cable Management Arm

Product ID (PID)	PID Description
UCSC-CMAF-M4	Reversible CMA for C220 M4 and M5 rack servers

For more information about the tool-less rail kit and cable management arm, see the *Cisco UCS C220 M5 Installation and Service Guide* at this URL:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M5/install/C220M5.html

NOTE: If you plan to rackmount your UCS C220 M5 server, you must order a tool-less rail kit. The same rail kits and CMAs are used for M4 and M5 servers.

STEP 12 SELECT MANAGEMENT CONFIGURATION (OPTIONAL)

By default, the C220 M5 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Dedicated, select the UCSC-DLOM-01 PID shown in [Table 19](#). In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. See [Chassis Rear View, page 6](#) for the location of the management port.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in [Table 19](#). In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C480M5/install/C480M5/C480M5_chapter_010.html#concept_rqj_vsr_fz

STEP 13 SELECT SERVER BOOT MODE (OPTIONAL)

By default, the C220 M5 server ships with UEFI as the default boot mode. To have a server shipped with the Legacy BIOS mode (which was standard on M4 and previous generation servers), select the Legacy BIOS PID from [Table 20](#).

Table 20 Server Boot Mode Ordering Information

Product ID (PID)	PID Description
UCSC-LBIOS-01	Legacy Boot Mode BIOS setting for C-Series Servers

STEP 14 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in [Table 21](#).

Table 21 Security Devices

Product ID (PID)	PID Description
UCSX-TPM2-001	Trusted Platform Module 1.2 SPI-based for UCS Servers
UCSX-TPM2-002	Trusted Platform Module 2.0 for UCS servers
UCSC-INT-SW01	C220 M5 and C240 M5 Chassis Intrusion Switch

NOTE:

- The TPM module used in this system conforms to TPM v1.2 and 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

STEP 15 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from [Table 22](#).

Table 22 Locking Bezel Option

STEP 16 ORDER CISCO SD CARD MODULE (OPTIONAL)

Order one or two matching SD cards. See [Figure 5 on page 69](#) for the location of the mini storage module connector, which accommodates an SD module. Each SD module accommodates two SD cards.

Table 23 Secure Digital (SD) Card

Product ID (PID)	PID Description
UCS-SD-128G	128 GB SD Card for UCS Servers
UCS-SD-64G-S	64 GB SD Card for UCS Servers

Caveats

- Install either one or two SD cards
- Do not mix SD card sizes
- You cannot mix SD cards with an internal M.2 SATA SSD (see [ORDER M.2 SATA SSDs \(OPTIONAL\), page 51](#)).

STEP 17 ORDER M.2 SATA SSDs (OPTIONAL)

Order one or two matching M.2 SATA SSDs. See [Figure 5 on page 69](#) for the location of the mini storage module connector, which accommodates an M.2 module. Each M.2 module has two PCIe/SATA M.2 SSD slots.

Table 24 M.2 SATA SSDs

Product ID (PID)	PID Description
UCS-M2-240GB	240 GB M.2 SATA SSD
UCS-M2-960GB	960 GB M.2 SATA SSD

Caveats

- Install either one or two M.2 SATA SSDs.
- You cannot mix M.2 SATA SSDs with SD cards (see [ORDER CISCO SD CARD MODULE \(OPTIONAL\), page 50](#))
- When ordering two M.2 devices with embedded software RAID, the maximum number of internal SATA drives supported is six. To support greater than six internal drives a Cisco 12G Raid Controller or a Cisco 12G SAS HBA must be ordered.

Cisco 6GB/s SATA Boot-Optimized M.2 RAID Controller

You can choose the Boot-Optimized RAID controller for Hardware RAID across the two internal SATA M.2 drives, which plugs in the mini-storage module socket on the motherboard.

Note: The Boot-Optimized RAID controller will support VMWare, Windows and Linux Operating Systems.

Table 25 Boot-Optimized RAID controller

Product ID (PID)	PID Description
UCS-M2-HWRAID	Cisco Boot optimized M.2 Raid controller

NOTE:

- This controller supports RAID 1 and JBOD mode
- The UCS-M2-HWRAID modular adapter is available only with 240 GB and 960 GB M.2 SSDs.
- (CIMC/UCSM) is supported for configuring of Volumes and monitoring of the controller and installed SATA M.2
- The minimum version of Cisco IMC and Cisco UCS Manager that support this controller is 4.0(4) and later. The name of the controller in the software is MSTOR-RAID
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported
- Hot-plug replacement is not supported. The server must be powered off.
- Boot-Optimized M.2 RAID Controller Module is not supported when the server is used as a compute node in HyperFlex configurations

STEP 18 ORDER INTERNAL MICRO-SD CARD MODULE (OPTIONAL)

Order a 32 GB micro-SD card. The micro-SD card serves as a dedicated local resource for utilities such as a Host Upgrade Utility (HUU). Images can be pulled from a file share (NFS/CIFS) and uploaded to the card for future use.

Table 26 32 GB Secure Digital (SD) Card (blank)

Product ID (PID)	PID Description

STEP 22 SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

Smart Net Total Care (SNTC) for UCS

UCS Drive Retention Service

With the Cisco Unified Computing Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available)

NOTE: Cisco does not offer a certified drive destruction service as part of this service.

Local Language Technical Support for UCS

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) – see tables above.

For a complete listing of available services for Cisco Unified Computing System, see the following URL:

OPTIONAL STEP - ORDER RACK(s)

The optional R42612 rack is available from Cisco for the C-Series servers, including the C220 M5 SFF server. This rack is a standard 19-inch rack and can be ordered with a variety of options, as listed in [Table 39](#). Racks are shipped separately from the C220 M5 SFF server.

Table 39 Racks and Rack Options

Product ID (PID)	PID Description
RACK2-UCS	Cisco R42612 expansion rack, no side panels.
RACK2-UCS2	This type of rack is used for multiple-rack deployments. Cisco R42612 static (standard) rack, with side panels.
RACK-BLANK-001	This type of rack is used for single-rack and end of row deployments. Side panels are needed for racks at the ends of multiple-rack deployments. For example, when configuring a row of 5 racks, order 1 standard rack plus 4 expansion racks. Apply the side panels from the standard rack to the racks at each end of the row. Blanking panels (qty 12), 1U, plastic, toolless.
RACK-CBLMGT-001	Recommended to ensure proper airflow. Fill all empty RU spaces in the front of the rack. Because each blanking panel PID includes 12 panels, use the following calculation: 42RU - occupied RU = available RU. Divide available RU by 12 to determine PID order quantity.
RACK-CBLMGT-003	Cable mgt D rings (qty 10), metal.
RACK-CBLMGT-011	Use the D rings to bundle system cables to ensure proper airflow. Brush strip (qty 1), 1 U.
RACK-FASTEN-001	The brush strip promotes proper airflow while allowing cables to be passed from the front to the rear of the rack.
RACK-FASTEN-002	Cable mgt straps (qty 10), Velcro.
RACK2-JOIN-001	Use the Velcro straps to bundle system cables to ensure proper airflow. Mounting screws (qty 100), M6.
RACK2-GRND-001	The rack ships with nuts and screws, but extras may be ordered. Cage nuts (qty 50), M6.
	The rack ships with nuts and screws, but extras may be ordered. Rack joining kit.
	Use the kit to connect adjacent racks within a row. Order 1 unit less than the number of racks in the row.
	Cisco R42612 grounding kit

For more information about the R42612 rack, see [Racks, page 75](#).

OPTIONAL STEP - ORDER PDU

An optional power distribution unit (PDU) is available from Cisco for the C-Series rack servers. This PDU is available in a zero rack unit (RU) style or horizontal PDU style see Cisco RP-Series Rack and Rack PDU specification for more details at

<http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf>

RAID Option ROM (OPROM) Settings

The server contains an Option ROM (OPROM) for the PCIe slots. The server has a finite amount of option ROM with which it can boot up devices. Go into the BIOS and disable the OPROM on the PCIe slots not used for booting so that resources are available for the slots that are used for booting. An example OPROM BIOS screen is shown in [Figure 7](#).

Figure 7 Example BIOS Screen for OPROM

To Create a RAID Group

(1) While the server is booting, wait for the prompt and press function key F2 as shown in [Figure 8](#).

Figure 8 Function Key F2 Prompt

In a few seconds, you will see the screen that allows you to set up a RAID group for the primary SATA controller (see [Figure 9](#)).

Racks

The Cisco R42612 rack is certified for Cisco UCS installation at customer sites and is suitable for the following equipment:

- Cisco UCS B-Series servers and fabric interconnects
- Cisco UCS C-Series and select Nexus switches

The rack is compatible with hardware designed for EIA-standard 19-inch racks. Cisco R42612 Rack. See Cisco RP-Series Rack and Rack PDU specification for more details at

<http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf>

PDU

Cisco RP Series Power Distribution Units (PDUs) offer power distribution with branch circuit protection.

Cisco RP Series PDU models distribute power to up to 42 outlets. The architecture organizes power distribution, simplifies cable management, and enables you to move, add, and change rack equipment without an electrician.

With a Cisco RP Series PDU in the rack, you can replace up to two dozen input power cords with just one. The fixed input cord connects to the power source from overhead or under-floor distribution. Your IT equipment is then powered by PDU outlets in the rack using short, easy-to-manage power cords.

The C-series severs accept the zero-rack-unit (ORU) or horizontal PDU. See Cisco RP-Series Rack and Rack PDU specification for more details at

<http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf>

KVM Cable

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in [Table 40](#).

Memory Support for CPU Classes and CPU Modes

For 2nd Generation Intel® Xeon® Scalable Processors:

- DIMMs and DCPMMs are supported
- CPU PIDs ending in “M” support up to a limit of 2048 GB per CPU
- CPU PIDs ending in “L” support up to a limit of 4608 GB per CPU
- All other CPU PIDs support up to a limit of 1024 GB per CPU
- For the App Direct Mode, both DCPMM and DIMM capacities count towards the CPU capacity limit
- For the Memory Mode and Mixed Mode only the DCPMM capacity counts towards the CPU capacity limit

For Configurations Using Only DIMMs

- CPU PIDs ending in “M” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs) and DIMM capacities up to 2048 GB per CPU (using 8 x 256 GB DIMMs).
- CPU PIDs ending in “L” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs) and DIMM capacities up to 3072 GB per CPU (using 12 x 256 GB DIMMs). The 4608 GB limit cannot be reached with these capacity DIMMs.
- CPU PIDs not ending in “L” or “M” support DIMM capacities up to 1024 GB per CPU (using 8 x 128 GB DIMMs or 4 x 256 GB DIMMs).

For Configurations Using DIMMs and DCPMMs in App Direct Mode

- CPU PIDs ending in “M” support capacities up to 1792 GB per CPU (using 6 x 128 GB DIMMs and 2 x 512 GB DCPMMs or 4 x 256 GB DCPMMs) or up to 2048 GB per CPU (using 6 x 256 GB DIMMs and 2 x 256 GB DCPMMs or 6 x 256 GB DIMMs and 4 x 128 GB DCPMMs)
- CPU PIDs ending in “L” support capacities up to 3840 GB per CPU (using 6 x 128 GB DIMMs and 6 x 512 GB DCPMMs) or up to 4608 GB per CPU (using 6 x 256 GB DIMMs and 6 x 512 GB DCPMMs)
- CPU PIDs not ending in “L” or “M” support capacities up to 1024 GB per CPU (using 6 x 128 GB DIMMs and 2 x 128 GB DCPMMs).

For Configurations Using DIMMs and DCPMMs in Memory or Mixed Mode

NOTE: For Memory and Mixed Modes, DIMMs are used as cache and do not factor into CPU capacity.

- CPU PIDs ending in “M” support capacities up to 2048 GB per CPU using:
 - 6 x 128 GB DIMMs as cache and 4 x 512 GB DCPMMs as memory, or
 - 6x 256 GB DIMMs as cache and 4 x 512 GB DCPMMs as memory
- CPU PIDs ending in “L” support capacities up to 3072 GB using:
 - 6 x 128 GB DIMMs as cache and 6 x 512 GB DCPMMs as memory, or

- 6 x 256 GB DIMMs as cache and 6 x 512 GB DCPMMs as memory

The allowable 4608 limit for DCPMM capacity is not reached in this case.

- CPU PIDs not ending in “L” or “M” support capacities up to 1024 GB per CPU using:

- 6 x 128 GB DIMMs as cache and 2 x 512 GB DCPMMs as memory, or
- 6 x 256 GB DIMMs as cache and 2 x 512 GB DCPMMs as memory

For Intel® Xeon® Scalable Processors:

- DIMMs are supported; DCPMMs are not supported
- CPU PIDs ending in “M” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs).

All other CPU PIDs support DIMM capacities up to 768 GB per CPU (using 6 x 128 GB DIMMs or 12 x 64 GB DIMMs)

UPGRADING or REPLACING CPUs

NOTE: Before servicing any CPU, do the following:

- Decommission and power off the server.
- Slide the C220 M5 SFF server out from the rack.
- Remove the top cover.

To replace an existing CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with replacement CPU.
- #1 flat-head screwdriver—Supplied with replacement CPU.
- CPU assembly tool—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPUAT=.
- Heatsink cleaning kit—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCSX-HSCK=.
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=.

(2) Order the appropriate replacement CPU from [Table 3 on page 13](#)

(3) Carefully remove and replace the CPU and heatsink in accordance with the instructions found in “Cisco UCS C220 M5 Server Installation and Service Guide,” found at:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M5/install/C220M5/C220M5_chapter_010.html#concept_bfk_kwp_hz.

To add a new CPU, follow these steps:

UPGRADING or REPLACING MEMORY

NOTE: Before servicing any DIMM or DCPMM, do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs or DCPMMs, follow these steps:

- (1) Order new DIMMs or DCPMMs as needed from [Table 4 on page 19](#).
- (2) Open both connector latches and remove and replace the DIMM/DCPMM as needed.

Figure 13 Replacing Memory

- (3) Press evenly on both ends of the DIMM/DCPMM until it clicks into place in its slot.**

NOTE: Ensure that the notch in the DIMM/DCPMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM/DCPMM, the slot, or both.

- (4) Press the connector latches inward slightly to seat them fully.**
