The Cisco Firepower® NGFW (next-generation firewall) is the industry’s first fully integrated, threat-focused next-gen firewall with unified management. It uniquely provides advanced threat protection before, during, and after attacks.

|                                                                                                                 |                                                                                                                                                                |
|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <br>Stop more threats          | Contain known and unknown malware with leading Cisco® Advanced Malware Protection (AMP) and sandboxing.                                                        |
| <br>Gain more insight          | Gain superior visibility into your environment with Cisco Firepower next-gen IPS. Automated risk rankings and impact flags identify priorities for your team.  |
| <br>Detect earlier, act faster | The Cisco Annual Security Report identifies a 100-day median time from infection to detection, across enterprises. Reduce this time to less than a day.        |
| <br>Reduce complexity          | Get unified management and automated threat correlation across tightly integrated security functions, including application firewalling, NGIPS, and AMP.       |
| <br>Get more from your network | Enhance security, and take advantage of your existing investments, with optional integration of other Cisco and third-party networking and security solutions. |

Model Overview

**Cisco Firepower 2100 Series:**  
The industry’s first midrange NGFWs delivering sustainable performance when threat inspection is enabled

**Cisco Firepower 4100 Series:**  
The industry’s first 1RU NGFWs with 40-Gbps interfaces

**Cisco Firepower 9300:**  
Ultra-high-performance NGFW, expandable as your needs grow

### Cisco ASA 5500-X Series:

Models for branch offices, industrial applications, and the Internet edge

### Firepower NGFWv:

The NGFW for virtual and cloud environments

## Platform Image Support

The Cisco Firepower NGFW includes Application Visibility and Control (AVC), optional Next-Gen IPS (NGIPS), Cisco® Advanced Malware Protection (AMP) for Networks, and URL Filtering. The Cisco Firepower 2100 Series, 4100 Series, and 9300 appliances use the Cisco Firepower Threat Defense software image. Alternatively, Cisco Firepower 2100 Series, 4100 Series, and 9300 appliances can support the Cisco Adaptive Security Appliance (ASA) software image.

## Management Options

Cisco Firepower NGFWs may be managed in a variety of ways depending on the way you work, your environment, and your needs.

[The Cisco Firepower Management Center](#) provides centralized management of the Cisco Firepower NGFW, the Cisco Firepower NGIPS, and Cisco AMP for Networks. It also provides threat correlation for network sensors and Advanced Malware Protection (AMP) for Endpoints.

The [Cisco Firepower Device Manager](#) is available for local management of 2100 Series and select 5500-X Series devices running the Cisco Firepower Threat Defense software image.

The Cisco [Adaptive Security Device Manager](#) is available for local management of the Cisco Firepower 2100 Series, 4100 Series, Cisco Firepower 9300 Series, and Cisco ASA 5500-X Series devices running the ASA software image.

[Cisco Defense Orchestrator](#) cloud-based management is also available for consistent policy management across Cisco security devices running the ASA software image, enabling greater management efficiency for the distributed enterprise.

## Firepower DDoS Mitigation

Also available on the Cisco Firepower 4100 Series and 9300 appliances is tightly integrated, comprehensive, behavioral DDoS mitigation for both network and application infrastructure protection. This DDoS mitigation is Radware's Virtual DefensePro (vDP). It is available from and supported directly by Cisco.

---

### Cisco Firepower 2100 Series Appliances

The Cisco Firepower 2100 Series is a family of four threat-focused NGFW security platforms that deliver business resiliency through superior threat defense. It offers exceptional sustained performance when advanced threat functions are enabled. These platforms uniquely incorporate an innovative dual multicore CPU architecture that optimizes firewall, cryptographic, and threat inspection functions simultaneously. The series' firewall throughput range addresses use cases from the Internet edge to the data center. Network Equipment Building Standards (NEBS)-compliance is supported by the Cisco Firepower 2100 Series platform.

### Cisco Firepower 4100 Series Appliances

The Cisco Firepower 4100 Series is a family of four threat-focused NGFW security platforms. Their throughput range addresses data center and internet edge use cases. They deliver superior threat defense, at faster speeds, with a smaller footprint. Cisco Firepower 4100 Series supports flow-offloading, programmatic orchestration, and the management of security services with RESTful APIs. Network Equipment Building Standards (NEBS)-compliance is supported by the Cisco Firepower 4120 platform.

### Cisco Firepower 9300 Security Appliance

The Cisco Firepower 9300 is a scalable (beyond 1 Tbps when clustered), carrier-grade, modular platform designed for service providers, high-performance computing centers, large data centers, campuses, high-frequency trading environments, and other environments that require low (less than 5-microsecond offload) latency and exceptional throughput. Cisco Firepower 9300 supports flow-offloading, programmatic orchestration, and the management of security services with RESTful APIs. It is also available in Network Equipment Building Standards (NEBS)-compliant configurations.

### Cisco ASA 5500-FTD-X Series Appliances

The Cisco ASA 5500-FTD-X Series is a family of eight threat-focused NGFW security platforms. Their throughput range addresses use cases from the small or branch office to the Internet edge. They deliver superior threat defense in a cost-effective footprint.

### Cisco Firepower NGFW Virtual (NGFWv) Appliances

Cisco Firepower NGFWv is available on VMware, KVM, and the Amazon Web Services (AWS) and Microsoft Azure environments for virtual, public, private, and hybrid cloud environments. Organizations employing SDN can rapidly provision and orchestrate flexible network protection with Firepower NGFWv. As well, organizations using NFV can further lower costs utilizing Firepower NGFWv.

## Performance Testing Methodologies

Cisco uses a variety of testing methodologies in a lab environment to ensure the performance specifications we report are as close to real world as possible. Firewall performance is affected by many factors including network environment, packet sizes, packet type, TLS encryption, and more.

Two modes of firewall testing exist: static or real world. Static testing leverages performance and security testing tools in a simulated environment. Real-world testing uses samples of live traffic on a production or side-car network. While static testing does not completely mimic performance in a real-world networking environment, we review and modify the static methodology to ensure the results are as close to real-world as possible.

The following are test methodologies used for measurements listed in Table 1. Small packet size tests will reflect additional inspection overhead thus results in reduced firewall throughput. The reduction is not linear, so extrapolation from a single test is not possible for the almost unlimited variety of network environments. Testing security efficacy or

security service performance under loaded conditions adds even more complexity. For these reasons we rely on the 1024B HTTP Test.

### 1024B HTTP Test (256KB Object)

This number is to compare with other vendors at a 256KB object size. It uses a larger and commonly tested packet size for every simulated session. With the protocol overhead, the average frame size is around 1024 bytes. This represents typical production conditions for most firewall deployments.

### 1500B UDP

This test uses a transactional UDP profile with 1500-byte frames. Due to the stateless nature of UDP, it creates very little impact on a stateful NGFW. Many vendors use this profile to measure maximum firewall performance, but it is only practical as a comparison point and does not represent world conditions.

### TLS

This test follows the 1024B HTTP test conditions with 50% of sessions encapsulated into TLS (HTTPS) and fully decrypted for inspection in hardware. Client TLS sessions use AES256-SHA cipher with 2048-bit RSA keys, and the server is assumed to reside behind the NGFW for Known Key decryption. These test results can be linearly extrapolated for other percentages of TLS traffic; for example, the NGFW throughput will be approximately twice as high with 25% of HTTPS connections in the overall traffic mix.

## Performance Specifications and Feature Highlights

Table 1 summarizes the capabilities of the Cisco Firepower NGFWv, Firepower 2100 Series, and 4100 Series and 9300 appliances as well as the Cisco ASA 5500-FTD-X appliances when running the Cisco Firepower Threat Defense image.

**Table 1.** Performance Specifications and Feature Highlights for Physical and Virtual Appliances with the Cisco Firepower Threat Defense Image

| Features                              | Cisco Firepower Model |           |             |           |             |           |            |            |            |                          |                          |                          |                           |            | Cisco ASA 5500-FTD-X Model |             |            |            |            |            |            |

Please see the section below for additional details |      |      |      |      |      |      |      |                          |                          |                          |                           |                            |             |             |            |            |            |            |            |  |  |

**Note:** Throughput assumes HTTP sessions with an average packet size of 1024 bytes. TLS numbers measured with AVC only policies and 50% TLS traffic with AES256-SHA cipher and RSA 2048-bit keys.

Performance will vary depending on features activated, and network traffic protocol mix, packet size characteristics and hypervisor employed (NGFWv). Performance is subject to change with new software releases. Consult your Cisco representative for detailed sizing guidance.

Table 2 summarizes the performance and capabilities of the Cisco Firepower 2100, 4100 Series and 9300 appliances when running the ASA image. For Cisco ASA 5500-X Series performance specifications with the ASA image, please visit the [Cisco ASA with FirePOWER Services data sheet](#).

**Table 2.** ASA Performance and Capabilities on Firepower Appliances

<sup>1</sup> Throughput measured with 1500B User Datagram Protocol (UDP) traffic measured under ideal test conditions.

<sup>2</sup> "Multiprotocol" refers to a traffic profile consisting primarily of TCP-based protocols and applications like HTTP, SMTP, FTP, IMAPv4, BitTorrent, and DNS.

<sup>3</sup> In unclustered configuration.

<sup>1</sup> Dual power supplies are hot-swappable.

<sup>2</sup> Fans operate in a 3+1 redundant configuration where the system will continue to function with only 3 operational fans. The 3 remaining fans will run at full speed.

<sup>3</sup> FPR-2130 platform is designed to be NEBS ready. The availability of NEBS certification is pending.

## Cisco Trust Anchor Technologies

Cisco Trust Anchor Technologies provide a highly secure foundation for certain Cisco products. They enable hardware and software authenticity assurance for supply chain trust and strong mitigation against a man-in-the-middle compromise of software and firmware.

Trust Anchor capabilities include:

- **Image signing:** Cryptographically signed images provide assurance that the firmware, BIOS, and other software are authentic and unmodified. As the system boots, the system's software signatures are checked for integrity.
- **Secure Boot:** Secure Boot anchors the boot sequence chain of trust to immutable hardware, mitigating threats against a system's foundational state and the software that is to be loaded, regardless of a user's privilege level. It provides layered protection against the persistence of illicitly modified firmware.
- **Trust Anchor module:** A tamper-resistant, strong-cryptographic, single-chip solution provides hardware authenticity assurance to uniquely identify the product so that its origin can be confirmed to Cisco, providing assurance that the product is genuine.

## Firepower DDoS Mitigation

Firepower DDoS Mitigation is provided by Virtual DefensePro (vDP), available and supported directly from Cisco on the following Cisco Firepower 9300 and 4100 series appliances:

| Cisco Firepower Model | ASA image | FTD Image |
|-----------------------|-----------|-----------|
| 9300 – SM-44          | yes       | yes       |
| 9300 – SM-36          | yes       | yes       |
| 9300 – SM-24          | yes       | yes       |
| 4150                  | yes       | yes       |
| 4140                  | yes       | yes       |
| 4120                  | yes       | yes       |
| 4110                  | yes       | yes       |

Radware vDP is an award-winning, real-time, behavioral DDoS attack mitigation solution that protects organizations against multiple DDoS threats. Firepower DDoS mitigation defends your application infrastructure against network and application degradation and outage.

### DDoS Mitigation: Protection Set

Firepower's vDP DDoS mitigation consists of patent-protected, adaptive, behavioral-based real-time signature technology that detects and mitigates zero-day network and application DDoS attacks in real time. It eliminates the need for human intervention and does not block legitimate user traffic when under attack.

The following attacks are detected and mitigated:

- SYN flood attacks
- Network DDoS attacks, including IP floods, ICMP floods, TCP floods, UDP floods, and IGMP floods

- Application DDoS attacks, including HTTP floods and DNS query floods
- Anomalous flood attacks, such as nonstandard and malformed packet attacks

## Performance

The performance figures in Table 8 apply to all Cisco Firepower 4100 series models.

**Table 8.** Key DDoS Performance Metrics for Cisco Firepower 4100 Series

| Parameter                                 | Value                                |
|-------------------------------------------|--------------------------------------|
| Maximum mitigation capacity/throughput    | 10 Gbps                              |
| Maximum legitimate concurrent sessions    | 209,000 Connections Per Second (CPS) |
| Maximum DDoS flood attack prevention rate | 1,800,000 Packets Per Second (PPS)   |

The performance figures in Table 9 are for Cisco Firepower 9300 with 1 to 3 Security Modules irrespective of Security Module type (SM-24, SM-36 or SM-44).

**Table 9.** Key DDoS Performance Metrics for Cisco Firepower 9300 with 1, 2, or 3 Security Modules.

| Parameter                                 | Firepower 9300 with 1 Security Module | Firepower 9300 with 2 Security Modules | Firepower 9300 with 3 Security Modules |
|-------------------------------------------|---------------------------------------|----------------------------------------|----------------------------------------|
| Maximum mitigation capacity/throughput    | 10 Gbps                               | 20 Gbps                                | 30 Gbps                                |
| Maximum legitimate concurrent sessions    | 209,000 Connections Per Second (CPS)  | 418,000 Connections Per Second (CPS)   | 627,000 Connections Per Second (CPS)   |
| Maximum DDoS flood attack prevention rate | 1,800,000 Packets Per Second (PPS)    | 3,600,000 Packets Per Second (PPS)     | 5,400,000 Packets Per Second (PPS)     |

## Ordering Information

### Cisco Smart Licensing

The Cisco Firepower NGFW is sold with Cisco Smart Licensing. Cisco understands that purchasing, deploying, managing, and tracking software licenses is complex. As a result, we are introducing Cisco Smart Software Licensing, a standardized licensing platform that helps customers understand how Cisco software is used across their network, thereby reducing administrative overhead and operating expenses.

With Smart Licensing, you have a complete view of software, licenses, and devices from one portal. Licenses are easily registered and activated and can be shifted between like hardware platforms. Additional information is available here: <https://www.cisco.com/web/ordering/smart-software-licensing/index.html>. Related information, on Smart Licensing Smart Accounts, is available here: <https://www.cisco.com/web/ordering/smart-software-manager/smart-accounts.html>.

### Cisco Smart Net Total Care Support: Move Quickly with Anytime Access to Cisco Expertise and Resources

Cisco Smart Net Total Care™ is an award-winning technical support service that gives your IT staff direct anytime access to Technical Assistance Center (TAC) engineers and Cisco.com resources. You receive the fast, expert response and the dedicated accountability you require to resolve critical network issues.

Smart Net Total Care provides the following device-level support:

- Global access 24 hours a day, 365 days a year to specialized engineers in the Cisco TAC
- Anytime access to the extensive Cisco.com online knowledge base, resources, and tools
- Hardware replacement options include 2-hour, 4-hour, Next-Business-Day (NDB) advance replacement, as well as Return For Repair (RFR)
- Ongoing operating system software updates, including both minor and major releases within your licensed feature set
- Proactive diagnostics and real-time alerts on select devices with Smart Call Home

In addition, with the optional Cisco Smart Net Total Care Onsite Service, a field engineer installs replacement parts at your location and helps ensure that your network operates optimally. For more information on Smart Net Total Care please visit: <https://www.cisco.com/c/en/us/services/portfolio/product-technical-support/smart-net-total-care.html>.

### Select Part Numbers

Tables 10, 11, and 12 provide details on part numbers for Cisco Firepower NGFW solutions. Please consult the Ordering Guide for additional configuration options and accessories.

**Table 10.** Cisco Firepower 2100 Series: Select Product Components

| Part Number (Appliance Master Bundle) | Description                        |
|---------------------------------------|------------------------------------|
| FPR2110-BUN                           | Cisco Firepower 2110 Master Bundle |
| FPR2120-BUN                           | Cisco Firepower 2120 Master Bundle |
| FPR2130-BUN                           | Cisco Firepower 2130 Master Bundle |
| FPR2140-BUN                           | Cisco Firepower 2140 Master Bundle |

| Part Number (Appliance Master Bundle)                                                                       | Description                                                          |
|-------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| Part Number (Network Module)                                                                                | Description                                                          |
| FPR2K-NM-8X10G=                                                                                             | Spare Cisco Firepower 8-port SFP+ network module                     |
| Part Number (Appliances with FTD software)                                                                  |                                                                      |
| FPR2110-NGFW-K9                                                                                             | Cisco Firepower 2110 NGFW Appliance, 1RU                             |
| FPR2120-NGFW-K9                                                                                             | Cisco Firepower 2120 NGFW Appliance, 1RU                             |
| FPR2130-NGFW-K9                                                                                             | Cisco Firepower 2130 NGFW Appliance, 1RU, 1 x Network Module Bays    |
| FPR2140-NGFW-K9                                                                                             | Cisco Firepower 2140 NGFW Appliance, 1RU, 1 x Network Module Bays    |

## Warranty Information

Find warranty information on cisco.com at the [Product Warranties](#) page.

## Cisco Services

Cisco offers a wide range of service programs to accelerate customer success. These innovative services programs are delivered through a unique combination of people, processes, tools, and partners, resulting in high levels of customer satisfaction. Cisco Services help you protect your network investment, optimize network operations, and prepare your network for new applications to extend network intelligence and the power of your business. For more information about Cisco services for security, visit <https://www.cisco.com/go/services/security>.

## Cisco Capital

### Flexible payment solutions to help you achieve your objectives

Cisco Capital makes it easier to get the right technology to achieve your objectives, enable business transformation and help you stay competitive. We can help you reduce the total cost of ownership, conserve capital, and accelerate growth. In more than 100 countries, our flexible payment solutions can help you acquire hardware, software, services and complementary third-party equipment in easy, predictable payments. [Learn more](#).
