

# High-Density Packet Voice/Fax Digital Signal Processor Module for Cisco AS5400XM and AS5350XM Voice Gateways

## PRODUCT OVERVIEW

The Cisco® High-Density Packet Voice/Fax DSP Module (AS54-PVDM2-64) helps the Cisco AS5400XM and AS5350XM Voice Gateways provide high-density voice connectivity to Cisco Voice Infrastructure and Applications (VIA) solutions. Cisco AS5000XM Series Voice Gateways offer service providers and large enterprises intelligent, high-capacity voice gateways that can be used for several solutions, including voice services over broadband, wholesale voice transport, unified communications, call-center services, IP-enabled interactive voice response (IVR), toll bypass, hosted IP telephony, and prepaid calling card services. The high-density packet voice/fax digital-signal-processor (DSP) module is available and supported in a single version (part number AS5X-PVDM2-64), shown in Figure 1.

**Figure 1.** Cisco High-Density Packet Voice/Fax DSP Module

Both sides of the module are shown in Table 1 and the numbers of voice channels and codecs that this module supports are shown in Table 2 and Table 3.

**Table 1.** Cisco PVDM2 Top and Bottom Views

| Part Number   | Top   | Bottom  |

\* Support is planned for a future Cisco IOS® Software release.

The Cisco AS54-PVDM2-64 connects to the Cisco AS5000XM Feature Card (part number AS5X-FC) through 80-pin single inline memory module (SIMM) slots. The module is field-insertable and removable. The Cisco AS5400XM and AS5350XM manage DSP resources on a call-by-call basis to service all codec types (low, medium, and high complexity). Six Cisco AS54-PVDM2-64 modules can be plugged into a Cisco AS5000XM Feature Card. Table 2 shows the number of calls supported per Cisco PVDM2 on the Cisco AS5000XM. Figure 2 shows how a Cisco PVDM2 is plugged into the feature card.

**Figure 2.** Cisco AS54-PVDM2-64 SIMM Slots on the Cisco AS5000XM Feature Card

## KEY FEATURES AND BENEFITS

### Investment Protection and Field-Upgradeable Capability

The Cisco AS54-PVDM2-64 is used across the series of Cisco AS5000XM Series Voice Gateways. This module shares the technology with the modules used in the Cisco Integrated Services Routers, facilitating continued evolution of capabilities and investment protection. The field upgradeable capability helps users easily scale their voice deployment and redeploy DSPs where needed. The high performance of the module supports future growth.

### High Density and Flexibility

The Cisco AS5X-PVDM2-64 provides high call density per DSP and flexibility on the channel allocation. The maximized support of uncompressed G.711 voice calls optimizes the DSP usage for the solutions where G.711 codecs are appropriate, including call centers and interactive-voice-response (IVR) solutions, and the flexibility allows for high compression where required, such as toll-bypass and wireless solutions.

## Industry-Leading Voice Quality

The Cisco AS54-PVDM2-64 performs compression, voice activity detection (VAD), jitter management and echo-cancellation functions to help ensure that the voice quality on Cisco Voice over IP (VoIP) solutions is toll quality. The echo cancellation offered in the module has a 64-ms tail length and is ITU-T G.168-compliant. Tables 3 through 5 describes the feature availability, supported IOS images, licenses, standards supported and ordering information regarding the module.

**Table 4.** Features Availability

| Part Number        | Platform Support            | Availability   | Release                              |
|--------------------|-----------------------------|--|--------------------------------------|
| AS5X-PVDM2-64      | Cisco AS5400XM and AS5350XM | All images   | Cisco IOS Software Release 12.4(4)XC |
| FR535XM-AMR-LIC(=) | Cisco AS5350XM              | Special license required to support AMR codecs on the Cisco AS5X-PVDM2-64 DSP; contact sales channel to obtain | Cisco IOS Software Release 12.4(4)XC |
| FR54XM-AMR-LIC(=)  | Cisco AS5400XM              | Special license required to support AMR codecs on the Cisco AS5X-PVDM2-64 DSP; contact sales channel to obtain | Cisco IOS Software Release 12.4(4)XC |

**Table 5.** Product Specifications

| Product                          | Specification   |
|----------------------------------|---|
| <b>Components</b>                |   |
| DSP                              | Texas Instruments TNETV2510GGW  |
| DSP CPU Clock                    | 200 MHz for TNETV2510GGW  |
| DSP External Memory              | 128-Mb synchronous dynamic RAM (SDRAM) for each DSP (there are a total of 4 DSP modules on the Cisco AS5X-PVDM2-64)   |
| Interface                        | 80-pin SIMM interface   |
| <b>Features</b>                  |   |
| Echo Cancellation                | Software echo cancellation compliant with ITU-I G.168 with 64-ms tail coverage  |
| <b>Approvals and Compliance</b>  |   |

## SERVICE AND SUPPORT

Cisco Systems® offers a wide range of support services to accelerate customer success. Innovative Cisco service programs are delivered through a unique combination of people, processes, tools, and partners, resulting in high levels of customer satisfaction. Cisco services help you protect your network investment, optimize network operations, and prepare your network for new applications to extend network intelligence and the power of your business. For more information about Cisco services, go to [Cisco Technical Support Services](#) or [Cisco Advanced Services](#).
