Cisco Security Bundles

Cisco® router security bundles deliver security features such as Cisco IOS® Software-based intrusion prevention systems (IPSs), firewall, content filtering, VPN, and infrastructure security services over numerous WAN access technologies, offering high levels of performance, security, scalability, and availability to meet today's growing business requirements. Cisco Catalyst® 6500 Series security bundles are based on the Cisco Catalyst 6500 Series E chassis and the Cisco 7600 Series/Catalyst 6500 Series IPSec VPN Shared Port Adapter (SPA), Cisco Catalyst 6500 Supervisor Engine 32 PISA, or Cisco Catalyst 6500 Series Firewall Services Module. Cisco 7600 Series security bundles are based on the Cisco 7600 Series E chassis and the IP Security (IPsec) VPN SPA. Cisco ASR 1000 Series Aggregation Services Router security bundles are available for the Cisco ASR 1002, ASR 1004, and ASR 1006 chassis and include the respective Cisco IOS XE feature licenses without the need for additional hardware support in the form of security blades or modules. The next generation of the Cisco Integrated Services Routers security bundles include the Cisco IOS Security PAK license. The bundles listed in Table 1 have been created and discounted for ease of ordering and adopting these advanced services.
